Cover letter November 24, 2023

Dear Sir/Madam,

I am so excited to apply for the Bending Spoons software engineer internship! I am in my second year of Master's degree in mathematics. Up to this point I have studied Quantum Computation. It was my big obsession. Unfortunately all this work is theoretical and I want to make impact right now. I have perfect analytical and programming skills. I don't want to subject myself to only one of the roles like Data Analyst or Software engineer. But I understand that I have to start somewhere and I understand my limitations. This is why I want this job. It is the greatest opportunity of my life and I am sure I will be a great fit.

All the details you can find in my CV. I hope to hear from you soon.

Yours faithfully,

Ivan Ogloblin
